SUBJECT INDEX
VOLUME 163

α-Amylase gene
  B. stearothermophilus, 401
ABC excinuclease, 817
Acetate catabolism
  Methanosarcina barkeri, 1000
  Methanosarcina sp. strain TM-1, 317
"*Achromobacter cycloclastes*"
  NO reduction, 837
  proton translocation, 837
Acid-soluble spore proteins of *Bacillus subtilis*, 543
Acinetobacter spp.
  plasmid-mediated 4-chlorobiphenyl mineralization, 882
Aerolysin activation, 336
Aeromonas hydrophila
  aerolysin activation, 336
Aeromonas salmonicida
  A-layer synthesis, export, and assembly, 877
  lipopolysaccharide production, 877
  plasmid pJB4JI and transposon mutagenesis, 877
Agrobacterium tumefaciens
  limited-host-range plasmid, 341
  Ti plasmids, 341
A-layer surface protein array of *Aeromonas salmonicida*, 877
Alcaligenes eutrophus
  H_2-oxidizing hydrogenase, 15
Alcaligenes latus
  H_2-oxidizing hydrogenase, 15
Alcaligenes spp.
  plasmid-mediated 4-chlorobiphenyl mineralization, 882
Aminoglycoside antibiotics
  supersensitive *S. cerevisiae* mutants, 8
Arginine decarboxylase synthesis in *Escherichia coli*, 522
Arthrobacter oxidans
  enantiozyme localization, 792
ATPase of *Mycoplasma gallisepticum*, 1243, 1250, 1258
ATP-dependent protein phosphorylation, 1203
Autoinducer uptake in *Vibrio fischeri*, 1210
Azospirillum brasilense
  cyst formation, 716
  exopolysaccharides, 716
  flocculation, 716
  glutamate synthase, 724
Azospirillum lipoferum
  cyst formation, 716
  exopolysaccharides, 716
  flocculation, 716
Azotobacter vinelandii
  H_2-dependent mixotrophic growth, 528
  N_2 fixation, 15, 528

Bacillus cereus
  β-lactamase I gene, 487
Bacillus megaterium
  glutathione-independent isomerase, 640
  maleylpyruvate isomerization, 640
Bacillus sphaericus
  crystal proteins, 738
  larvicidal toxin, 738
Bacillus stearothermophilus
  α-amylase gene nucleotide sequence, 401
  neutral protease gene
    nucleotide sequence, 824
    promoter region, 824
Bacillus subtilis
  cationized ferritin binding, 1167
  cell division, 648
  cell pole DNA, 895
  cell wall asymmetry, 1167
  charge distribution on the cell wall, 1167
  chromosomal-DNA amplification, 445
  ctc transcription, 610
  exoenzyme secretion, 648
  glutamate synthase gene regulation, 957
  integration of linear DNA molecules, 111
  metal ion binding, 1167
  methylcytosine-containing DNA, 573
  nitrogen source, 957
  origin of replication 895
  phage ϕ105 control elements, 1101
  promoter mutations, 610
  Rec$^-$ mutants
    heat resistance, 774
    UV light resistance, 774
  spo0A and *spo0C* mutants, 411
  spore protein synthesis, 543
  spores, 774
  sporulation, 648
  terminus of replication, 895
  tet, 445
  Tet^r mutants, 445
  thermoinducible transcription system, 1101
  vegetative cells, 774
Bacteriocin resistance
  E. chrysanthemi mutants, 221
Bacteriodes gingivalis
  fimbriae, 730
Bacteriodes intermedius
  fibrinogen binding, 623
Bacteriodes thetaiotaomicron
  outer membrane proteins
    chondroitin sulfate growth, 1080
Bacteriophage
  E. chrysanthemi sensitivity, 221
Bacteriophage f1
  adhesion zones, 1270
  assembly and mutational blocks, 900
  assembly site, 1270
  fip loci and morphogenesis, 900
  phage gene I, 1270
Bacteriophage ϕ105
  B. subtilis thermoinducible-expression, 1101
Bacteriophage ϕC31
  S. coelicolor gene cloning, 965
Bacteriophage lambda
  E. coli cation levels, 906
  nutL transcription, 704
Bacteriophage Mu
  target site of integration, 282
  transposition, 282
Bacteriophage P1
  E. coli cation levels, 906
Bacteriophages T2 and T4, 832
Bacteriophage T4
  E. coli cation levels, 906
  ndd mutants, growth inhibition, 1290
  nuclear disruption mutants, 1290
Bdellovibrio bacteriovorus
  basal complexes, 1038
  flagella
    structure, 1038
    waveform analysis, 1038
  nucleoside monophosphate uptake, 1087
  OmpF-like outer membrane protein synthesis, 595
  sheathed flagella
    generation of motility, 1047

Spores of *Bacillus subtilis*, 774
Sporulation
B. subtilis, 411, 648
spoT mutations in *Salmonella typhimurium*, 534
Staphylococcus spp.
penicillin-binding proteins, 796
Statistical inference in molecular genetics, 806
Sterol uptake control
heme biosynthesis, 199
S. cerevisiae, 199
Stigmatella aurantiaca
fruiting body formation, 515
Streptococcus faecalis
phosphoenolpyruvate:sugar phosphotransferase, 1203
Streptococcus pneumoniae
cell wall synthesis, 46
peptidoglycan cross-linking, 46
purpura production, 389
techoic acid attachment, 46
Streptomyces ambofaciens
protoplasts
plasmid transformation, 180
Streptomyces antibioticus
phenoxazinone synthase regulation, 1215
Streptomyces coelicolor
bldA cloning and analysis, 965
morphological development, 965
Streptomyces fradiae
protoplasts
plasmid transformation, 180
Succinate dehydrogenase of *Rhodopseudomonas sphaeroides*, 778
Sucrose uptake in *Vibrio alginolyticus*, 1293
Sulfate transport in *Escherichia coli*, 1267
supN
E. coli $tRNA^{Lys}$, 1288
Sym plasmid genes in *R. japonicum*
nitrogen fixation specificity, 385
nodulation specificity, 385

tar and *tap* null phenotypes in *Escherichia coli*, 586
terC
E. coli, 398
tet
B. subtilis amplified DNA, 445
T-even bacteriophages, 832
Thermoanaerobacter ethanolicus
maintenance energy coefficients, 1275
maximum growth yields, 1275
Thiobacillus species
phylogenetic analysis, 75
5S rRNA sequences. 75
Thiomicrospira species
phylogenetic analysis, 75
5S rRNA sequences, 75
Thioredoxin reductase
E. coli trxB, direct cloning of, 238
filamentous phage f1 assembly, 238
Thymidine kinase gene
P. aeruginosa, cloning in, 291
P. stutzeri, cloning in, 291
Ti plasmid
A. tumefaciens, 341
Tn*5*-induced mutants of *Pseudomonas perfectomarina*, 918
TOL plasmid
xyl operon regulatory gene, 863
xylR
protein product, 863
transcription initiation site, 863
tox iron-mediated regulation
C. diphtheriae, 1114
E. coli, 1114
toxR
V. cholerae, 580
Transcription
E. coli recA, 748
E. coli ribosomal protein operon, 140
E. coli rRNA, 704
ilvIH operon in *E. coli*, 186
repression by leucine, 186
Transcription terminator in *Salmonella typhimurium*, 362
Transducers
E. coli
homology with other methyl-accepting proteins, 262
Transformation

E. coli binding-protein-dependent transport, 61
S. ambofaciens protoplasts, 180
S. fradiae protoplasts, 180
Transport
sn-glycerol-3-phosphate in *E. coli*, 392
S. typhimurium
proline, 296
proP gene, 296
Transport energization in *Escherichia coli*, 1237
Transposition
bacteriophage Mu integration site, 282
Transposon mutagenesis in *Pseudomonas solanacearum*, 1263
Transversion mutations
induction in *E. coli*, 213
tra of plasmid pCU1, 1229
Trichosporon cutaneum
β-ketoadipate pathway, 1126, 1136
cycloisomerization, 1136
Trithionate reduction in *Desulfovibrio vulgaris*, 472
$tRNA^{Lys}$ genes of *Escherichia coli*, 1288
trxA
E. coli, 311
nucleotide sequence, 311

UMP transport in *Bdellovibrio bacteriovorus*, 1087
Unbalanced rRNA gene dosage, 476
UV mutagenesis in *Escherichia coli*, 460

Vibrio alginolyticus
sucrose uptake, 1293
Vibrio cholerae
hemolysin production regulation, 799
hlyR, 799
osmotic sensitivity, 1158
outer membrane proteins, 1158
sphaeroplast-like bodies, formation, 1158
toxR, 580
Vibrio fischeri
autoinducer uptake, 1210
fatty acid reductase components, 1186
luminescence operon, 1186
luminescence system regulation, 1210

Xanthine dehydrogenase from *Pseudomonas putida*, 600
Xanthobacter autotrophicus
haloalkane dehalogenase, 635
xyl operon of the TOL plasmid, 863
xyl transcription in *Bacillus subtilis*, 610
